

# Water Softener LEX - T

Triple water softener

## Field of application

SYR's Water Softener Limex LEX-T is designed to protect water pipes and water heaters against lime deposits, which will slow down the water flow and increase the energy consumption. This effective protection preserves appliances and valves from damage, thus preventing cost-intensive repair works. The consumption of laundry detergents and household cleaners is considerably lower with

partially softened water than with non-softened water. DIN 1988, part 200 defines no restrictions on use in the field of application. The water softener's capacity allows for partial softening of the overall amount of water used in single-family houses or apartment houses as well as of partial water quantities used for hot water, swimming pools, washing machines and dishwashers.

## Design

The Limex LEX-T is a water softening system based on the proven ion exchange process. When in operation, water flows permanently through two resin tanks. The microprocessor control regulates the quantity-based regeneration intervals for the three tanks. The system automatically triggers a

regeneration cycle when the predefined capacity has been reached in one exchange resin tank. This method makes sure that the water volume to be treated is automatically distributed to 3 exchanger resin tanks. This results in a hygienic, economic and efficient functionality.

## Materials

The functional parts are made of high-quality synthetic material. The body and the internal plastic parts are made of shock-resistant thermoplast and the rubber parts of ageing-resistant elastomers. All other functional parts are made from a low-lead,

dezincification-resistant brass alloy and stainless steel. The materials used are state-of-the-art. The synthetic parts in contact with water meet all requirements of the German Federal Environment Agency (KTW Directive).

## Installation

Use the Drufimax universal flange (DN 32- DN 50) (accessory) to mount the LEX-T. The delivery includes bypass valves with an integrated bypass as well as a three-way connection group. Install the water softener close to and downstream of the water metering system. Mount a potable water filter (System

Drufi) upstream of the water softener to prevent malfunctions and offer efficient protection. The water to be softened has to be clear, free from solid impurities and iron- and manganese-free (values as set in the Drinking Water Ordinance).

Thoroughly flush the pipe prior to installation. Mount the required Drufimax universal flange in horizontal or vertical pipes without applying stresses. All electric connections are factory-

mounted. Make sure that a (floor) drain for the safety overflow and a waste water connection to drain the flushed water are provided. Set up the salt tank separately.

## Technical specifications

Service pressure:	min. 2 bar, max. 8 bar
Nominal pressure:	max. 10 bar
Service temperature:	max. 30°C
Fluid:	potable water
Flow rate T1 / T2 / T3 / T4:	5.0 / 5.6 / 9.0 / 11.2 m³/h at 1.0 bar Δp
Storage salt tank T1 / T2 / T3 + T4:	110 / 200 / 300 liters
Resin quantity T1 / T2 / T3 / T4:	3 x 20 / 3 x 30 / 3 x 60 / 3 x 90 liters
Capacity T1 / T2 / T3 / T4:	80 / 120 / 240 / 360 m³ / °dH
Salt consumption per regeneration T1 / T2 / T3 / T4:	about 3.2 kg / 4.8 kg / 9.6 kg / 14.4 kg per exchanger resin tank
Power consumption:	4 W
Power supply:	12V / 50 Hz
Serial number:	1500 ...

## Maintenance

As the water softener LEX T works automatically, the only thing to do is to refill salt on a regular basis. According to EN 806, part 5, the device has to be serviced at least once a year and in case of

collective installations twice a year. A maintenance contract between the user and a qualified installer provides for safe and durable functionality.

Connection flange not included in delivery!
